# WORD_OUT

This program is a follow-on to WORD_IN.  This program must create a file and write to it.  The specific problem will be to write a list of random numbers to the file.  The program must do the following:

1) Prompt the user for the number of random numbers to be written to the file.
2) The output file name should be test.dat.
3) Generate random numbers should be between 0 and 1000 and write these numbers to the output file.

Below is an example output file:

test.dat

```
102
231
981
543
699
111
.
.
.
```
